

MINI COOPER DETERMINATOR

The Mini Cooper Determinator will trap the three and four depth tumblers.
It will pass the one and two depth tumblers.
Below you can see that space 7 is trapped.
Take note on how the RELEASE TOOL is used to push the tumbler out of the trap.

MINI COOPER DETERMINATOR

Instructions

1. Insert the Mini Cooper Determinator fully into the lock and then slowly pull the tool out.
2. Take note of the space indicator when the tool stops.
3. Any space that gets trapped and stops is a 3 or 4 depth tumbler. Any space that passes will be a 1 or 2 depth tumbler.
4. Use the release tool to release any trapped tumbler.
5. Decode both sides of the lock.

NOTES:

The Mini Cooper Determinator traps the 3 and 4 depth tumblers. Tumblers that trapped will be cut to a $3 \frac{1}{2}$ depth.

Tumblers that passed are either a 1 or a 2 depth tumbler. They will be cut to a $1 \frac{1}{2}$ depth.

Half cuts work very well in both the door and the ignition locks.

You can adjust your key by picking up impression marks.

The door lock has a clutch system.

The odd spaces are on one side of the lock and the even spaces are on the other side .

When you decode one side of the lock you will notice the space indicators line up right at the shutter.

Your spacing indicators will line up on one side of the lock.

The Mini Cooper Determinator will work in the Ignition lock.

The Mini Cooper DETERMINATOR is designed for the Mini Coopers only. IT will not work on BMW 2 track systems.
